## OBJECTIVE

Final-year B.Tech student in Computer Science & Business Systems with hands-on experience in AI/ML engineering, full-stack development, and cybersecurity. Seeking a challenging role to leverage my skills in Python, AI tools, and software engineering to build innovative, real-world solutions.

## EDUCATION

**B.Tech – Computer Science & Business Systems** 2022 – 2026

Visvesvaraya Technological University (VTU), Belagavi — CGPA: 8.2 / 10.0

**PUC – Science & Commerce** 2020 – 2022

Swami Vivekananda PU Science & Commerce College, Bilagi, Karnataka

## INTERNSHIP EXPERIENCE

**AI/ML Engineer Intern** Aug 2024 – Mar 2025 (8 months)

Inventron Technologies — Bengaluru, India

- Developed and deployed machine learning models for real-world business problems using Python, scikit-learn, and TensorFlow.
- Built data preprocessing pipelines and performed feature engineering on large datasets to improve model performance.
- Integrated AI models into production-ready applications via REST APIs, collaborating with cross-functional teams.
- Applied NLP techniques for text classification and sentiment analysis tasks with measurable accuracy improvements.
- Documented model evaluation metrics and presented insights to both technical and non-technical stakeholders.

## CERTIFICATION

**Green Skills and Artificial Intelligence** | Edunet Foundation – Skills4Future Program

Completed a structured program on AI fundamentals, sustainable technology practices, and responsible AI deployment aligned with green skills for the future workforce.

## PROJECTS

**Online Billing System (Live)** | React.js, Firebase, Vercel

- Built a full-stack, secure billing application to generate, manage, and track invoices with an intuitive UI.
- Implemented multi-user authentication and role-based access control for secure data management.
- Used Google Firebase Realtime Database for persistent storage of items, clients, and invoice records.
- Deployed live on Vercel with CI/CD integration for seamless, zero-downtime updates.

**Movie Recommendation System** | Python, scikit-learn, Pandas

- Developed a content-based filtering recommendation engine using feature extraction and cosine similarity metrics.
- Processed and vectorized movie metadata to identify patterns and suggest films based on user preferences.
- Optimized recommendation accuracy and query efficiency for faster, more relevant suggestions.

**Image Steganography in Social Networks (2024)** | Python, OpenCV, Cryptography

- Implemented advanced steganographic techniques to securely embed hidden messages within digital images.

- Evaluated robustness against steganalysis detection tools, confirming suitability for secure social platform communication.
- Applied encryption alongside steganography for a dual-layer data security approach.

### **AI-Based Deepfake Detection & Media Authenticity System (Ongoing)** | *Python, Deep Learning, Computer Vision*

- Building a deep learning model to detect AI-generated deepfake images and videos using CNN architectures.
- Researching media forensics techniques to analyze pixel-level inconsistencies and metadata anomalies.
- Targeting deployment as a web-based tool for real-time media authenticity verification.

## **TECHNICAL SKILLS**

---

**AI & Machine Learning:** Python, TensorFlow, scikit-learn, OpenCV, NLP, AI Tools

**Web Development:** React.js, HTML, CSS, JavaScript, Firebase, Vercel

**Databases:** MySQL, PostgreSQL, MongoDB, SQL, Firebase Realtime Database

**Programming Languages:** Python, C, C++, JavaScript, SQL

**Cybersecurity:** Penetration Testing, Cryptography, Steganography, Blockchain Fundamentals

**Systems & Tools:** Linux Terminal, Git, GitHub, Operating Systems, Computer Networks

**Data Structures & Algorithms:** DSA problem solving (Python / C++)

**Productivity Tools:** Microsoft Excel, Google Sheets, Problem Solving
